PRESS RELEASE

AL FARIS GROUP

Head Office: Dubai, UAE

FOR IMMEDIATE RELEASE

AL FARIS introduces the first Liebherr 450-tonne all terrain crane to the Middle East Region.

Al Faris extends its existing crane fleet with a Liebherr mobile crane: the LTM 1450-8.1 – the first of its kind in the Middle East Region!

The very long yet powerful 85m telescopic boom with excellent load capacities make it easy for this machine to lift heavy loads at heights. The Liebherr 8-axle crane has been designed for worldwide cost-effective mobility and fast, easy set-up on site. It is already a favourite among our clients with high market demand.

As a comprehensive crane service provider, Al Faris will be providing qualified crane operators to its customers and also taking care of maintenance. Our operators have undergone Liebherr specific training by the manufacturer's competent product trainers, and so have our engineers, technicians, and all our service and maintenance teams. We have a state-of-the-art facility in Dubai for service and maintenance, with qualified technicians working to international standards. So, our customers can rest assured that our cranes will be performing in peak condition.

Our customers will prefer these cranes due to their faster set-up features and economical performance, resulting in cost savings. Al Faris is proud to be the first and, so far, the only company to offer this new Liebherr crane to customers in the Middle East.
