PRESS RELEASE

AL FARIS GROUP
Head Office: Dubai, UAE

FOR IMMEDIATE RELEASE

Al Faris showcase our capability on a Wind Energy Project in Jordan!

Supporting our customers ANYWHERE, ANYTIME, whatever they need us for!

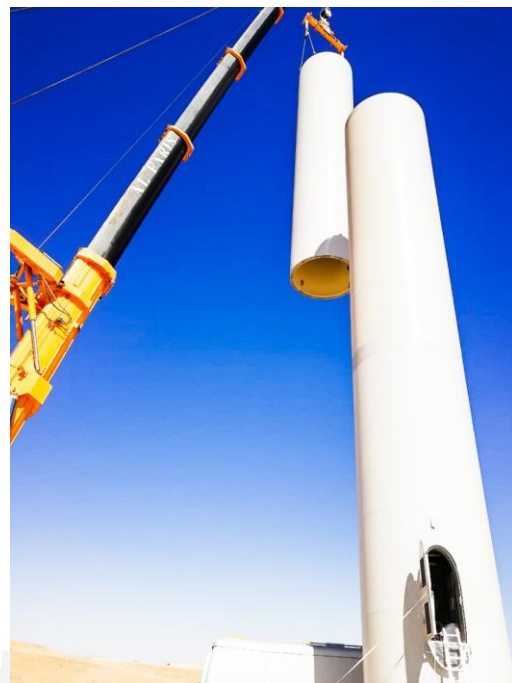

We were recently awarded a project to support our client in Jordan to set-up a wind farm. The wind mills needed to be erected and assembled accordingly.

After careful consideration and calculations the Liebherr (LTM 1500), 500t All Terrain Mobile Crane was selected as the most suitable to safely carry out the heavy lifts. This crane was mobilized to Jordan from our KSA branch along with 3 of our well trained staff members showcasing our capabilities and strength to cater to any projects in the entire Middle Eastern Region.

All surveys, planning, technical support documentation, execution plans and schedules were prepared in-house prior to job execution. This helped organize all activities smoothly with minim delays. Execution was safely carried out by our trained operators.

The loads varied from 64t to 90t. Our 550t mobile crane was used with main boom operations.

We also provided a strong commitment and focus to adhere to best HSE practices on-site which was discussed in detail with the client prior to the commencement of any operations.
